Electrical table stripping machine for very thin enamelled copper wires

Electrical table stripping machine for enamelled copper wires with diameters from 0.04 to 0.3 mm.
 The enamelled wire is inserted between the rotating, conical glass-fibre bevel brushes from the top (or from the front).
 When the wire is pulled out, the enamel has been brushed off.
 A knurled screw is used to adjust the distance of the bevel brushes to the respective wire diameter.
 There are two brush types with different hardness available for different insulating coatings and wire thicknesses.

Technical specifications:

- Material Ø: 0.03 - 0.3 mm
- Stripping length: infinite
- Mains connection: 230V / 50Hz or 115V / 60Hz
- Width: 230 mm
- Length: 150 mm
- Height: 170 mm
- Weight: 4.0 kg

Stripping brushes:

- Type 127 soft (0.12 - 0.3 mm)
- Type 640 hard (0.03 - 0.15 mm)
